## MRPI® REGISTRATION

1.1.01039.2025

## DATE OF THIS ISSUE

16-12-2025

## EXPIRY DATE

16-12-2030

## SCOPE OF DECLARATION

This MRPI®-EPD certificate is verified by Lex Roes , EcoChain. The LCA study has been done by Martijn Blaak & Bjorn Uijen , EcoReview NL B.V.. The certificate is based on an LCA-dossier according to ISO14025+EN15804 A2 (+indicators A1). It is verified according to the 'Verification protocol for MRPI LCA project report & EPD 21th of May 2025, V. 5.2'. EPDs of construction products may not be comparable if they do not comply with EN15804+A2. Declaration of SVHC that are listed on the 'Candidate list of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

## PROGRAM OPERATOR

Amsterdam

## PRODUCT

Eco2cem [Conform NL-PCR Cement]

## DECLARED UNIT / FUNCTIONAL UNIT

1 Mass (t)

## DESCRIPTION OF PRODUCT

Eco2cem, mainly consisting of ground granulated blastfurnace slag (GGBS), is a latent hydraulic material and is normally used in combination with an activator (such as Portland cement).

## DETAILED PRODUCT DESCRIPTION

Eco2cem is mostly used as cementitious binder in concrete. It has a very low environmental impact, and is used to minimize the embodied CO<sub>2</sub> and embodied energy of cementitious and concrete products. Because its chemistry is different to Portland cement, it imparts additional durability benefits to concrete, such as improved resistance to sulphate attack, acid attack, and chloride migration. It also gives concrete higher long-term strength than that made with ordinary Portland cement. And because of its whitish colour, it gives concrete a lighter, clearer appearance and less efflorescence.

Eco2cem is produced in the Netherlands and several other European countries and is available on the European market.

| Component (> 1%)         | (%) |
|--------------------------|-----|
| Ground Blastfurnace Slag | 100 |

## SCOPE AND TYPE

The type of this EPD is Cradle-to-Gate (A1-A3). Module C1 to C4 and module D are not declared because the materials are no longer identifiable at end of life as a result of the physical or chemical transformation process in the concrete products. All major steps from the extraction of natural resources to the factory gate are included in the environmental performance of the manufacturing phase, except those that are not relevant to the environmental performance of the product.

The software EcoChain is used to perform the LCA. The background databases used are:

- Ecoinvent (v3.6&3.9.1)

- IRP = Potential Human exposure efficiency relative to U235 [1]
- ETP-fw = Potential Comparative Toxic Unit for ecosystems [2]
- HTP-c = Potential Comparative Toxic Unit for humans, cancer [2]
- HTP-nc = Potential Comparative Toxic Unit for humans, non-cancer [2]
- SQP = Potential soil quality index [2]

## Disclaimer [1]:

- This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste.

## Disclaimer [2]:

- The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

## CALCULATION RULES

### Data quality

Data flows have been modeled as realistically as possible. Data quality assessment is based on the principle that the primary data used for processes occurring at the production site is selected in the first instance. Where this is not available, other reference data is selected from appropriate sources. Moreover, the latest update of the Ecolnvent database was used which holds the most up-to-date records (<2 years). Because the project activities take place in the future, the representativeness of the data is dependent on how the work will be executed. The real impact of the project activities could be modelled in an as-build study whenever the project is taken into use. All the environmental impacts are quantified and qualified in environmental effects. Direct emissions from the inventory are characterized by characterization factors from CML for EN15804+A1 and from EF 3.1 for EN15804+A2. Data has been assessed according to Annex E from EN 15804. All records used fall under the requirements of fair, good or very good in terms of geographical, technical or time representativeness.

### Data collection period

The dataset is representative for the production processes used in 2024.

### Methodology and reproducibility

The process descriptions and quantities in this study are reproducible in accordance to the reference standards that have been used. The references of all sources, both primary and public sources and literature, have been documented. In addition, to facilitate the reproducibility of this LCA, a full set of data records has been generated which can be accessed via the EcoChain tool. This data portfolio contains a summary of all the data used in this LCA, and correspondingly, in Ecocem Benelux EcoChain account.

## SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

### A1. Raw materials supply

This module considers the extraction and processing of GBS. The system boundary of the raw material production is determined between the blast furnace slag production and the quenching process. The impacts related to the quenching of the blast furnace slag are allocated onto the Eco2cem production like is stated in the NL-PCR cement v1.0.

### A2. Transport of raw materials to manufacturer

This includes the transport distance of the GBS to the manufacturing facility via road, boat and/or train.

### A3. Manufacturing

This module covers the manufacturing of the Eco2cem and includes all processes linked to production such as drying, grinding and internal transportation. For the use of electricity mix a market for approach was chosen. The use of fuels and auxiliary materials in the Eco2cem production is taken into account as well.

## DECLARATION OF SVHC

None of the substances contained in the product are listed in the "Candidate List of Substances of Very High Concern for authorisation", or they do not exceed the threshold with the European Chemicals Agency.
